

## EXTRUDED SHEETS IN PP-R GREY IN THE FORMAT 4000 X 2000 X 50 mm

AGRU Kunststofftechnik GmbH is pleased to inform about the next expansion of the product program. For applications, where thick-walled plates with a perfect surface quality are needed, AGRU offers now also large-format plates. Extruded sheets in PP-R grey (similar to RAL 7032) with a wall thickness of 50 mm are now available in the format 4000 x 2000 mm.

The properties of extruded and pressed sheets do not differ in terms of mechanical, chemical, thermal and electrical properties in a significant way, but extruded plates have the advantage of a smooth, shiny surface in comparison to pressed sheets, which are machined after the pressing process.

Up to now AGRU Kunststofftechnik has already offered in its huge supply range extruded and pressed sheets in PP with wall thicknesses of 2-120 mm. Sheets with a wall thickness of more than 40 mm have so far been produced in the pressing process; now sheets up to a wall thickness of 50 mm are produced by the extrusion process.

AGRU Kunststofftechnik is confident, to have done the next step to meet all the requirements of fabricators for plastic components.

The semi finished product for thick walled components with highest surface quality is available- EXTRUDED SHEETS IN PP-R WITH A THICKNESS OF 50 mm (ARTICLE NUMBER: 11.600.4020.50).
